Transition Assessment Considerations

School closures due to COVID-19 have presented many challenges for educators, including provision of FAPE during a national emergency. If you must prepare for the IEP Meeting of a transition-age student, you must conduct transition assessment and do so remotely. This document provides information and considerations as you determine individual student/family needs, as well as their levels of access to technology and other means of communication.

See the Texas Transition website for links to guidance from state and federal agencies. See the Texas Education Agency Special Education and Special Populations website for more guidance related to special education during this time of school closures.

Transition Assessment Considerations

- What local policies or procedures are in place for your LEA? Discuss with the special education director the LEA expectations for completing transition planning requirements during this time of school closures.
- What transition assessment information already exists?
- Obtain student and parent input, understanding that futures planning may be low priority for students/families during a time of global uncertainty. See table below for levels of access to communication with school.
- Document the professional decisions made in your method of conducting the transition assessment. For example, if preparing the IEP for a student with no access to any type of communication, review the previous IEP, including transition assessments, and complete the “Teacher Version” of a transition assessment. Another way would be to contact a teacher with knowledge of the student to complete the same version of the assessment.

Tips for completing transition assessments while e-learning (Indiana Secondary Transition Resource Center on March 24, 2020):

- Make a Google Form for students to complete and submit their assessments. Check out this Elective Class Reflection example.
- Copy/paste the questions from an assessment into an email, and have students respond.
- Summarize activities that have been completed so far in the school year from current transition services/activities (elective classes, coursework in a class, college fairs, pre-ETS work, task analysis) showcasing a student’s strengths, preferences, interests, and needs.
- Conduct a phone interview (just make sure that you write down the questions and answers to help you summarize it later).
