

Van Alstyne ISD Purchases Land for Next High School

Van Alstyne ISD is pleased to announce the purchase of 103 acres of land located adjacent to Grayson College on Cartwright Road. Board of Trustees President, Randall Morgan said, “This is a great acquisition for the Van Alstyne ISD. It positions the district to handle future growth and will allow us to continue expanding our offering of educational programs for our students. Having Grayson College within walking distance will be a huge benefit to both our students and the community, allowing both organizations opportunities to partner on future facilities and programs. Dr. Brown and the Board of Trustees are to be commended for their diligent efforts to secure this location for the future of Van Alstyne students.”

As promised in our last bond initiative, the district used the \$1.5 Million designated in the bond as well as savings from our annual operating fund balance to purchase this property. Following our long-range plan, this new site will house a facility for our future high school students. The size of this property will allow us to build a master planned high school campus with all the amenities at this location. This location enables the district to continue providing our students the best possible education experience as our enrollment grows well into the future. Superintendent of Schools, Dr. David Brown stated, “The district is committed to the children of Van Alstyne and this investment allows us to continue to provide more academic possibilities well into the future. With this site being located adjacent to Grayson College, our students will have the opportunity to receive services from the district as well as the College. Van Alstyne ISD and

Grayson College are committed to working together to maximize the opportunities achieved by this location for the students enrolled at Van Alstyne ISD.” Dr. Jeremy McMillen, President of Grayson College stated, “Grayson College and Van Alstyne ISD have a long history of partnering to transform lives. Our relationship has led to countless students completing dual credit while in high school, transitioning to Grayson and moving on to a university and the workforce. This acquisition provides a huge opportunity to double down on our partnerships and do something really unique in our region.”
