NORTH KINGSTOWN SCHOOL DISTRICT EMPLOYEES AND PARENTS:

RE: Radon Testing Reports

This is the annual updated letter which confirms that all schools and school buildings have been tested for radon by a certified, licensed laboratory service. The purpose of this regulation is to protect the public health and public interest by establishing a comprehensive program to reduce exposure to radon/radon progeny levels in public and high priority buildings and to ensure that all radon/radon progeny mitigation activity in these buildings is conducted only by appropriately trained and licensed/certified personnel.

The North Kingstown School Department has contracted with Ocean State Analytical Services, and AccuStar Professional Radon Laboratory has provided radon progeny measurements to the district.

The North Kingstown School Department is committed to maintaining a safe and healthy school environment for all children, employees, and guests in our schools.

Copies of our radon testing results are available for review on request at the North Kingstown Plants and Grounds Office located at 120 Fairway Drive, North Kingstown.

Sincerely,

Philip G. Auger, Ph.D.
Superintendent of Schools
