

Steps To Make Your Prop Smaller

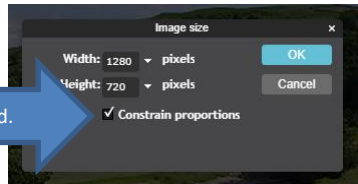

- File-Open into Pixlr

- Once loaded into Pixlr, look at the bottom, left corner

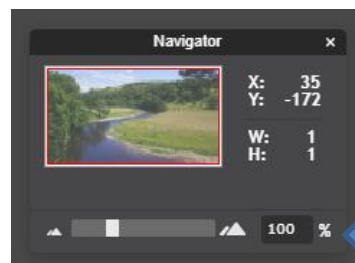

- If either pixel (px) number is higher than 900, you will need to do these steps:

- Image – Image size
- Change the higher number to less than 900. (The other number will change automatically.)
 - The number you choose depends on how big you need it to be in the picture.
 - If it is almost as tall as the picture, then use approximately 800.
 - If you need it to be fairly small, make it around 400.
 - Don't make it too small or it will pixelate when you combine the pictures.
 - You can shrink it more when you combine the layers.

Make sure this is checked.

- OK
- Use the Navigator Menu or lower left corner to zoom to 100%

Type 100 and press enter.

- SAVE AS:

- Name: Edited Background
- Format: .PXD
- Put in Photo Editing folder in your user drive
