

FOR IMMEDIATE RELEASE

JEWISH ACADEMY OF ORLANDO COMPLETES INSTALLATION OF GERM-KILLING TECHNOLOGY

(1.17.19) - **Maitland, FL**

In an effort to reduce student and teacher absences, Jewish Academy of Orlando completed installation of the Violet Defense patented germ-killing technology. The UV operated products are designed to prevent the spread of illness-causing germs. The technology is designed to help combat up to 99.9% of bacteria and viruses, including E. Coli, Salmonella, Norovirus, and superbugs like MRSA. The technology will help protect the students, staff, and faculty of JAO from these illness-causing germs, including flu.

The school is now the first K-5 school in America to be fully outfitted with Violet Defense's system. Each of the school's classrooms, along with the clinic, library, public restrooms, and lunchroom, is automatically disinfected each night. The school also has access to mobile options to deploy in any spaces without an installed solution, or in the event of immediate disinfection needs, such as with a sick child.

"The safety and health of our students is always of primary concern to us," said Head of School Alan Rusonik. "Less absences leads to a healthy campus and more learning. We are grateful that the donation of the Violet Defense technology has likely contributed to these findings."

Jewish Academy of Orlando serves central Florida students of all faiths from grades kindergarten through fifth. The school delivers a whole-child education fostering academic excellence and character education rooted in Jewish values. Jewish Academy of Orlando is accredited by the Florida Council of Independent Schools. Beginning in fall of 2019, the school will offer a transitional kindergarten.
