Annual Asbestos Notification

August 2018

In order to comply with the AHERA regulations, the Riverview Community School District has been working with a certified asbestos consultant. In accordance with Section 763.93(g)(4) of the Federal Asbestos Hazard Emergency Response Act of 1986 (AHERA), Riverview Community School District is required to take definite steps regarding asbestos containing materials in its school facilities.

The purpose of this federal law is to provide protection for public health, especially employees and those who are school age, from the hazards of asbestos.

All Riverview Community School District facilities have been inspected by a certified asbestos inspector for asbestos containing materials. The inspection reports have been reviewed and management plans prepared for each facility.

An Asbestos Management Plan for each facility is on file in each respective school building office. Additional copies of the Management Plans are available at the Operations Department, 17829 Krause Street, Riverview, Michigan 48193.

If asbestos containing material is present in the building, specific plans for regular inspections, monitoring, and removal are contained in the Management Plans. These plans and all related materials are available for review by staff, students, parents, contractors, and the general public.

Questions related to the implementation of the AHERA regulations may be directed to Mr. Gary Kennedy, Director of Operations at 734-285-3900.
