## SENSORY-BASED APPROACH: COMMUNICATION & ASSISTIVE TECHNOLOGY

### Jane Korsten

This two-day workshop will present non-traditional assessment and intervention strategies appropriate for the development of communication in individuals with severe and/or multiple differences and impairments, developmental differences, and/or autism. Participants will gain information that is relevant to the needs of those individuals who are currently unable to communicate their wants/needs spontaneously in their environment, regardless of age or severity of physical and/or cognitive differences. Techniques discussed will incorporate current research in the areas of communication, education and sensory integration.
