Grades 3-8: 1:30p-2:30p
10 week session. \$170 per session.
Includes instruction and all materials.

**Exciting New
Projects**

3D Printing Introduction to Engineering Class

This class teaches students how to create Computer Aided Designs (CAD) and then print them in 3D out of plastic right before their eyes. Kids will learn the engineering process while designing kid friendly items that will be printed on the 3D printer. Students will also have the ability to explore this easy to use software and create their own projects to turn their dreams into a 3D reality.
