*The recommended interval for Hepatitis A vaccine between dose #1 and dose #2 is 6-18 months. School nurses or officials cannot **require** dose #2 until at least 18 months have passed since dose #1.

**All vaccine doses administered up to and including 4 days before the minimum interval of age will satisfy school entry immunization requirements.

¹ Serologic evidence of infection or serologic confirmation of immunity to measles, mumps, rubella, hepatitis A, hepatitis B, or varicella is acceptable in place of vaccine.

² Other schedules may apply.

³ For students aged 11-15 years, 2 doses meet the requirement if adult hepatitis B vaccine (Recombivax®) was received. Dosage (10 mcg/1.0 mL) and type of vaccine (Recombivax®) must be clearly documented. If Recombivax® was not the vaccine received, a 3-dose series is required.

⁴ Previous chickenpox illness may be documented with a written statement from a **physician, school nurse, or the child's parent or guardian** containing wording such as: **"This is to verify that (name of student) had chickenpox disease on or about (date) and does not need varicella vaccine."** This written statement will be acceptable in place of any and all varicella vaccine doses required.

⁵ Polio vaccine is not required for students 18 years or older.

⁶ Students vaccinated prior to 2009 with 2 doses of measles and one dose each of mumps and rubella satisfy this requirement.

⁷ If a student received the vaccine at 10 years of age, this will satisfy the requirement.
