

5<sup>th</sup> Grade Math Scope and Sequence  
 \*Major Work of the Grade

Revised August 2018

1 <sup>st</sup> Nine Weeks				
Time	Cluster	Standards	Learning Targets	Lesson Topics/Resources
1 <sup>st</sup> 9 Weeks	5.NBT.A Understand the place value system	5.NBT.A.1* Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and 1/10 of what it represents in the place to its left.	- I can recognize that in a multi-digit number, all digits to the left are 10 times greater than that place and all digits to the right are 1/10 the value of that place.	My Math Lessons: 1-1, 1-5, 1-6
		5.NBT.A.2* Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10.	-I can multiply numbers by powers of 10 and explain patterns in the number of zeros in the product. -I can multiply and divide a decimal by a power of 10 and explain patterns in the placement of the decimal point. -I can use whole number exponents to denote powers of 10.	My Math Lessons: 2-3, 2-4, 2-5, 6-6, 6-9, 6-14
		5NBT.A.3* Read and write decimals to thousandths using standard form, word form, and expanded form (e.g., the expanded form of 347.392 is written as $3 \times 100 + 4 \times 10 + 7 \times 1 + 3 \times (1/10) + 9 \times (1/100) + 2 \times (1/1000)$ ). Compare two decimals to thousandths based on meanings of the digits in each place and use the symbols $>$ , $=$ , and $<$ to show the relationship.	-I can read and write decimals to thousandths using standard form, word form, and expanded form. -I can compare decimals to thousandths and use $>$ , $=$ , and $<$ to show the relationship.	My Math Lessons: 1-3 through 1-9
		5.NBT.A.4*Round decimals to the nearest hundredth, tenth, or whole number using understanding of place value.	-I can round decimals to the nearest hundredth, tenth, or whole number.	My Math Lessons: 5-1, 5-2, 5-3, 6-1
	5.NBT.B – Perform operations with	5.NBT.B.5* Fluently multiply multi-digit whole numbers (up to three-digit by four-digit factors) using appropriate strategies and algorithms.	-I can fluently multiply multi-digit numbers (up to 3-digit by 4-digit	My Math Lessons: 2-6 through 2-10, 6-1,

**5<sup>th</sup> Grade Science Scope and Sequence**  
**\*Major Work of the Grade**

Revised August 2018

multi-digit whole numbers and with decimals to hundredths.		factors) using appropriate strategies and algorithms.	6-8, 6-9, 8-4
	5.NBT.B.6* Find whole-number quotients and remainders of whole numbers with up to four-digit dividends and two-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.	-I can find whole number quotients and remainders of whole numbers with up to 4-digit dividends and 2-digit divisors using place value strategies, properties of operations, and/or the relationship between multiplication and division. -I can illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.	My Math Lessons: 3-1 through 3-13 & 4-1 through 4-6
5.OA.A – Write and interpret numerical expressions	5.OA.A.1 Use parentheses and/or brackets in numerical expressions, and evaluate expressions having these symbols, using the conventional order (Order of Operations).	-I can use the Order of Operations to evaluate expressions that include parentheses and/or brackets.	My Math Lessons: 7-1, 7-2, 7-4
	5.OA.A.2 Write simple expressions that record calculations with numbers, and interpret numerical expressions without evaluating them. For example, express the calculation "add 8 and 7, then multiply by 2" as $2 \times (8 + 7)$ . Recognize that $3 \times (18,932 + 921)$ is three times as large as $18,932 + 921$ , without having to calculate the indicated sum or product.	-I can write simple numerical expressions.  -I can interpret numerical expressions without evaluating them.	My Math Lessons: 7-3
5.NBT.B – Perform operations with multi-digit whole numbers and with decimals to hundredths.	5.NBT.B.7* Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between operations; assess the reasonableness of answers using estimation strategies. (Limit division problems so that either the dividend or the divisor is a whole number.)	-I can add, subtract, multiply, and divide decimals to hundredths using place value strategies, properties of operations, and/or the relationship between operations. -I can assess the reasonableness of answers by estimating.	My Math Lessons: 5-2 through 5-10, 6-2 through 6-8, 6-10 through 6-14

**5<sup>th</sup> Grade Science Scope and Sequence**  
**\*Major Work of the Grade**

Revised August 2018

2 <sup>nd</sup> Nine Weeks				
Time	Cluster	Standards	Learning Targets	Lesson Topics/Resources
<b>2<sup>nd</sup> 9 Weeks</b>	5.NF.A – Use equivalent fractions as a strategy to add and subtract fractions.	5.NF.A.1* Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. (For example, $\frac{2}{3} + \frac{5}{4} = \frac{8}{12} + \frac{15}{12} = \frac{23}{12}$ . (In general, $\frac{a}{b} + \frac{c}{d} = \frac{ad + bc}{bd}$ .)	-I can add and subtract fractions (and mixed numbers) with unlike denominators using equivalent fractions.	My Math Lessons: 9-4 through 9-8, 9-10 through 9-13
		5.NF.A.2* Solve contextual problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. (For example, recognize an incorrect result $\frac{2}{5} + \frac{1}{2} = \frac{3}{7}$ , by observing that $\frac{3}{7} < \frac{1}{2}$ .)	-I can solve real-world problems using adding/subtracting fractions with unlike denominators. -I can use benchmark fractions and number sense to check reasonableness of answers.	My Math Lessons: 9-2 through 9-13
	5.NF.B – Apply and extend previous understandings of multiplication and division to multiply and divide fractions.	5.NF.B.3* Interpret a fraction as division of the numerator by the denominator ( $\frac{a}{b} = a \div b$ ). Solve contextual problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers by using visual fraction models or equations to represent the problem. (For example, if 8 people want to share 49 sheets of construction paper equally, how many sheets will each person receive? Between what two whole numbers does your answer lie?)	-I can interpret a fraction as division of the numerator by the denominator ( $\frac{a}{b} = a \div b$ ). -I can recognize that when I divide two whole numbers and get a remainder, the remainder and the quotient together are parts of a whole. -I can solve contextual problems involving the division of whole numbers that result in quotients that are in the form of fractions or mixed numbers. -I can explain and illustrate my strategy when solving word problems that involve fractions by using visual fraction models or equations.	My Math Lessons: 8-1

**\*Major Work of the Grade**

		<p>5.NF.B.4* Apply and extend previous understandings of multiplication to multiply a fraction by a whole number or a fraction by a fraction.</p> <p>a. *Interpret the product <math>a/b \times q</math> as <math>a \times (q \div b)</math> (partition the quantity <math>q</math> into <math>b</math> equal parts and then multiply by <math>a</math>). Interpret the product <math>a/b \times q</math> as <math>(a \times q) \div b</math> (multiply <math>a</math> times the quantity <math>q</math> and then partition the product into <math>b</math> equal parts). (For example, use a visual fraction model or write a story context to show that <math>3/4 \times 16</math> can be interpreted as <math>3 \times (16 \div 4)</math> or <math>(3 \times 16) \div 4</math>.. Do the same with <math>2/3 \times 4/5 = 8/15</math>. (In general, <math>a/b \times c/d = ac/bd</math>.)</p> <p>b. Find the area of a rectangle with fractional side lengths by tiling it with unit squares of the appropriate unit fraction side lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.</p>	<p>-I can multiply fractions by other fractions or whole numbers.</p> <p>-I can interpret the product of <math>\frac{a}{b} \times c</math> as <math>a \times (c \div b)</math> OR <math>\frac{a}{b} \times c</math> as <math>(a \times c) \div b</math>.</p> <p>-I can find the area of a rectangle with fractional side lengths using models to show that it is the same as using <math>A = L \times W</math>.</p> <p>- I can find the area of a rectangle with fractional side lengths by multiplying the sides together (<math>A=L \times W</math>).</p>	<p>My Math Lessons: 10-1 through 10-6, 10-12</p>
		<p>5.NF.B.5* Interpret multiplication as scaling (resizing).</p> <p>a. *Compare the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication. (For example, the product of <math>1/2</math> and <math>1/4</math> will be smaller than each of the factors.)</p> <p>*Explain why multiplying a given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case); explain why multiplying a given number by a fraction less than 1 results in a product smaller than the given number; and relate the principle of fraction equivalence to the effect of multiplying <math>a/b</math> by 1</p>	<p>-I can determine if a number will be greater or less than its value when multiplying by a fraction mentally.</p> <p>-I can explain why multiplying by a fraction that is greater than 1 increases the value of the number and multiplying by a fraction that is less than 1 decreases the value of the number.</p>	<p>My Math Lessons: 8-3, 8-6 through 8-8, 10-6, 10-8</p>

5<sup>th</sup> Grade Science Scope and Sequence

Revised August 2018

**\*Major Work of the Grade**

		<p>5.NF.B.6* Solve real-world problems involving multiplication of fractions and mixed numbers by using visual fraction models or equations to represent the problem.</p>	<p>-I can solve real-world problems involving multiplying fractions/mixed numbers by using models or equations.</p>	<p>My Math Lessons: 10-1 through 10-4, 10-6 through 10-8, 10-12</p>
		<p>5.NF.B.7* Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions. (Students able to multiply fractions in general can develop strategies to divide fractions in general, by reasoning about the relationship between multiplication and division. But division of a fraction by a fraction is not a requirement at this grade.)</p> <p>a. *Interpret division of a unit fraction by a non-zero whole number, and compute such quotients. Use visual models and the relationship between multiplication and division to explain that <math>(1/3) \div 4 = 1/12</math> because <math>(1/12) \times 4 = 1/3</math>.</p> <p>b. *Interpret division of a whole number by a unit fraction, and compute such quotients. Use visual models and the relationship between multiplication and division to explain that <math>4 \div (1/5) = 20</math> because <math>20 \times (1/5) = 4</math>.</p> <p>*Solve real world problems involving division of unit fractions by non-zero whole numbers and division of whole numbers by unit fractions by using visual fraction models and equations to represent the problem. (For example, how much chocolate will each person get if 3 people share 1/2 lb of chocolate equally? How many 1/3-cup servings are in 2 cups of raisins?)</p>	<p>-I can divide unit fractions by whole numbers.</p> <p>-I can divide whole numbers by unit fractions.</p> <p>-I can interpret division of a unit fraction by a whole number and use models to show the relationship between multiplication and division.</p> <p>-I can interpret division of a whole number by a unit fraction and use models to show the relationship between multiplication and division.</p> <p>-I can solve real-world problems involving the division of unit fractions by whole numbers and whole numbers by unit fractions by using models and equations.</p>	<p>My Math Lessons: 10-9 through 10-12</p>

**\*Major Work of the Grade**

Revised August 2018

3 <sup>rd</sup> Nine Weeks				
Time	Cluster	Standards	Learning Targets	Lesson Topics/Resources
3 <sup>rd</sup> 9 Weeks	5.MD.A – Convert like measurement units within a given measurement system	5.MD.A.1 Convert customary and metric measurement units within a single system by expressing measurements of a larger unit in terms of a smaller unit. Use these conversions to solve multi- step real world problems involving distances, intervals of time, liquid volumes, masses of objects, and money (including problems involving simple fractions or decimals). For example, 3.6 liters and 4.1 liters can be combined as 7.7 liters or 7700 milliliters.	<p>-I can multiply or divide to convert measurements within the same measurement system by expressing measurements in a larger unit in terms of a smaller unit.</p> <p>-I can use these conversions to solve multi-step real world problems involving distances, intervals of time, liquid volumes, masses of objects, and money.</p> <p>-I can use fractional equivalencies to convert customary units of measure.</p> <p>-I can use place value strategies to convert metric units of measure (using decimals).</p>	My Math Lessons: 11-1 through 11-7, 11-9 through 11-13
	5.MD.B – Represent and interpret data	5.MD.B.2 Make a line plot to display a data set of measurements in fractions of a unit ( $\frac{1}{2}$ , $\frac{1}{4}$ , $\frac{1}{8}$ ). Use operations on fractions for this grade to solve problems involving information presented in line plots. For example, given different measurements of liquid in identical beakers, find the amount of liquid each beaker would contain if the total amount in all the beakers were redistributed equally.	<p>-I can make a line plot to display a data set of measurements in fractions of a unit.</p> <p>-I can use operations on fractions to solve problems using information on line plots.</p>	My Math Lessons: 11-8
	5.MD.C – Geometric measurement: understand concepts of volume and relate volume to	5.MD.C.3* Recognize volume as an attribute of solid figures and understand concepts of volume measurement. a. *Understand that a cube with side length 1 unit, called a "unit cube," is said to have "one cubic unit" of volume, and can be used to measure volume.	<p>-I can recognize volume as an attribute of solid figures and understand concepts of volume measurement.</p> <p>-I can understand that a cube with 1 side, called a "unit cube," is said to have "one cubic unit" and can be used to</p>	My Math Lessons: 12-8, 12-12

Revised August 2018

**\*Major Work of the Grade**

multiplication and to addition	b. *Understand that a solid figure which can be packed without gaps or overlaps using n unit cubes is said to have a volume of n cubic units.	measure volume. -I can understand that volume can be found by packing solid figures with cubes without gaps or overlaps.	
	5.MD.C.4* Measure volume by counting unit cubes, using cubic cm, cubic in, cubic ft, and improvised units.	-I can measure volume by counting unit cubes.	My Math Lessons: 12-8, 12-12
	5.MD.C.5* Relate volume to the operations of multiplication and addition and solve real world and mathematical problems involving volume of right rectangular prisms. a. *Find the volume of a right rectangular prism with whole-number side lengths by packing it with unit cubes, and show that the volume is the same as would be found by multiplying the edge lengths, equivalently by multiplying the height by the area of the base. Represent whole-number products of three factors as volumes (e.g., to represent the associative property of multiplication). b. *Apply the formulas $V = l \times w \times h$ and $V = B \times h$ (where B represents the area of the base) for rectangular prisms to find volumes of right rectangular prisms with whole number edge lengths in the context of solving real world and mathematical problems. c. *Recognize volume as additive. Find volumes of solid figures composed of two non-overlapping right rectangular prisms by adding the volumes of the non-overlapping parts, applying this technique to solve real world problems.	-I can relate volume to operations of multiplication and addition. -I can solve real world problems that involve the volume of right rectangular prisms. -I can find the volume of a right rectangular prism with whole number side lengths by packing it with cubes and show that it would be the same if edge lengths were multiplied. -I can represent whole number products of three factors as volumes. -I can apply the volume formulas to find the volumes of right rectangular prisms and solve real world and mathematical problems that involve such.  -I can recognize volume as an additive when finding the volume of two non-overlapping right rectangular prisms and solve real world problems involving such.	My Math Lessons: 12-9 through 12-12
5.G.A - Graph points on the coordinate plane to solve real-world	5.G.A.1 Graph and label points using the first quadrant of the coordinate plane. Understand that the first number indicates the horizontal distance traveled along the x-axis from the origin, and the second number indicates the vertical distance traveled along	-I can graph and label points using the first quadrant of the coordinate plane. -I can understand that the first number represents distance traveled on the x-	My Math Lessons: 7-8, 7-9

**\*Major Work of the Grade**

	mathematical problems	the y-axis with the convention that the names of the two axes and the coordinates correspond (e.g., x-axis and x-coordinate, y-axis and y-coordinate).	axis from the origin, and the second number represents distance traveled on the y-axis from the origin.	
		5.G.A.2 Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.	-I can represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane. -I can interpret coordinate values of points in the context of the situation.	My Math Lessons: 7-7 through 7-9
	5.G.B – Classify two-dimensional figures into categories based on their properties	5.G.B.3 Classify two-dimensional figures in a hierarchy based on properties. Understand that attributes belonging to a category of two-dimensional figures also belong to all subcategories of that category. For example, all rectangles have four right angles and squares are rectangles, so all squares have four right angles.	-I can classify two-dimensional figures in a hierarchy based on properties. -I can understand that attributes belonging to a category of two-dimensional figures also belong to all subcategories of that category.	My Math Lessons: 12-1 through 12-5
	5.OA.B – Analyze patterns and relationships	5.OA.B.3 Generate two numerical patterns using two given rules. For example, given the rule "Add 3" and the starting number 0, and given the rule "Add 6" and the starting number 0, generate terms in the resulting sequences. <ul style="list-style-type: none"> <li>a. Identify relationships between corresponding terms in two numerical patterns. For example, observe that the terms in one sequence are twice the corresponding terms in the other sequence.</li> <li>c. Form ordered pairs consisting of corresponding terms from two numerical patterns and graph the ordered pairs on a coordinate plane.</li> </ul>	-I can generate two numerical patterns using two given rules. -I can identify relationships between corresponding terms in two numerical patterns. -I can form ordered pairs consisting of corresponding terms from two numerical patterns and graph the ordered pairs on a coordinate plane.	My Math Lessons: 7-5, 7-6, 7-9

**\*Major Work of the Grade**

Revised August 2018

4th Nine Weeks				
Time	Cluster	Standards	Learning Targets	Lesson Topics/Resources
<b>4<sup>th</sup> 9 Weeks</b>	5.NBT.B – Perform operations with multi-digit whole numbers and with decimals to hundredths. <b>(ONGOING)</b>	*REVIEW PREVIOUSLY TAUGHT STANDARDS/LEARNING TARGETS.		
		5.NBT.B.5* Fluently multiply multi-digit whole numbers (up to three-digit by four-digit factors) using appropriate strategies and algorithms.	-I can fluently multiply multi-digit numbers (up to 3-digit by 4-digit factors) using appropriate strategies and algorithms.	My Math Lessons: 2-6 through 2-10, 6-1, 6-8, 6-9, 8-4
	5.NBT.B.6* Find whole-number quotients and remainders of whole numbers with up to four-digit dividends and two-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.	-I can find whole number quotients and remainders of whole numbers with up to 4-digit dividends and 2-digit divisors using place value strategies, properties of operations, and/or the relationship between multiplication and division. -I can illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.	My Math Lessons: 3-1 through 3-13 & 4-1 through 4-6	
	5.NBT.B.7* Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between operations; assess the reasonableness of answers using estimation strategies. (Limit division problems so that either the dividend or the divisor is a whole number.)	-I can add, subtract, multiply, and divide decimals to hundredths using place value strategies, properties of operations, and/or the relationship between operations. -I can assess the reasonableness of answers by estimating.	My Math Lessons: 5-2 through 5-10, 6-2 through 6-8, 6-10 through 6-14	
5.OA.A – Write and interpret numerical expressions. <b>(ONGOING)</b>	5.OA.A.1 Use parentheses and/or brackets in numerical expressions, and evaluate expressions having these symbols, using the conventional order (Order of Operations).	-I can use the Order of Operations to evaluate expressions that include parentheses and/or brackets.	My Math Lessons: 7-1, 7-2, 7-4
