### **Penn State University Engineering Ambassadors visit AAHS**

A group of Engineering Ambassadors from Penn State University Park recently visited several physics classes at AAHS. The engineering students spent the day working with high school students on STEM activities related to physics and engineering.

Students in Mr. Borst's classes used a plunger to design and test a prosthetic leg. Students in Mr. Repeka's classes worked in aerodynamics designing airplane wings. And, students in Mr. Geis's classes designed and tested tennis rackets using cardboard.

Under the direction of Ms. Kathy Roe, the Engineering Ambassadors work with school groups as a way to promote engineering as a career path.
